

Rodina (Hybrid)

Beet All/Beet/All/Mature/Baby Leaf

Rodina is a cylindrical beet variety that is well suited for processing markets - slicing and dicing. Due to its unique root shape, Rodina offers high yields. Rodina has a smooth, dark red root with a small crown and tap root. It is a slower growing variety that is very bolt tolerant. Rodina has dark green, upright leaves that result in easy harvesting.

- For processing and home garden
- Good for slicing and canning

GENERAL

Disease Resistance:
IR: Cb

Days to Maturity to Baby Leaf: 28-32

Days to Maturity from Direct Seed:
65-70+

CHARACTERISTICS

Root Shape

- Cylindrical

Bolt Resistance

- Very High

Exterior Color

- Dark Red

Interior Color

- Deep Red

Leaf Characteristics

- Smooth

Exterior Characteristics

- Smooth

HG Market Segment

- Mail Order
- Seed Packet
- Farm Market

Market Use

- Multi
- Bunch
- Specialty

RESISTANCE TERMINOLOGY

HR = High resistance: plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pathogen or pest pressure.

IR = Intermediate resistance: plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to "highly resistant" varieties. Intermediately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pathogen or pest pressure.

T = Tolerance: The ability of a plant variety to endure abiotic stress without serious consequences for growth, appearance and yield.

DISCLAIMER

Claims and other disclosed information are based on our observations and/or information from other sources. Crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, the environment, including management, and other uncontrollable factors that may alter expected performance.

Statements on the reaction of varieties to a specific pathogen, pest or stress are based on evaluation under defined conditions. These reactions can be affected by changes in environmental and biological factors, especially new pathogen races, pest biotypes or vectors of disease agents. Therefore, we give no warranty, express or implied, for crop performance relative to the information given; nor do we accept any liability for any loss, direct or consequential, that may arise from any cause. Read all seed package labeling.

INTERESTING NOTES

Beets are enjoying a come-back! Not only are they delicious, but nutritious. Beets provide a rich source of carbohydrates and protein, and have high levels of important vitamins, minerals and micronutrients. They are a great source of potassium, magnesium, folic acid, iron, zinc, calcium, phosphorus, sodium, niacin, biotin, betanin and beta-carotene. They also contain the important vitamins - A, B6 and C – plus, powerful antioxidants and soluble fiber.
